

T9 Trigger Sprayers - 28/410 Screw Cap - Various Colours

Product Information

Specifications

Output:	1ml
Colours:	white/natural, red/natural, blue/natural, green/natural and yellow/natural – other colours are available upon request
Screw Cap:	28mm / 410
Dip Tube:	260mm

Materials

Body, valve case, cap, trigger, nozzle: **Polypropylene**

Piston, dip tube, filter, spinner: **Polyethylene**

Springs, ball valve: **Stainless Steel**

Gasket: **PEL**

Uses

Household

Horticultural

Industrial

Hairdressing

Automotive

Features

- A robust sprayer at an **affordable** price
- A heavy duty sprayer, which is re-usable and economical
- A protected reventing system which avoids damage under the trigger
- A choice of **five colours**, allowing you to colour-code your products and make them easier to use.
- A natural body, with a modern “technical” look
- A fully adjustable nozzle
- A dip tube filter, which stops any particles blocking the internal parts of the sprayer

Tips

Make sure you have the right cap and bottle size

The standard Trigger Sprayers have a 28mm diameter cap with two different heights – Deep (28/410) and Shallow or Short (28/400). In the UK, the most common size for the retail market or Ready to Use (RTU) pack is the 28/410. The industrial/re-useable packs tend to have the 28/400 caps. These references correspond to the necks on the bottle so your bottle manufacturer can confirm what neck is on their bottle. If you have 400 cap on a 410 bottle neck there will be a gap under the cap. If you have a 410 cap on a 400 bottle neck, the pack will not seal on the gasket and it will leak.
